

Chemistry Corner

Types of Chemical Bonding: Doodle Notes

The Notes:

Teacher Tips and Hints

The three types of chemical bonding are included in these notes: ionic, covalent, and metallic. Students will explore and describe each bond formation and distinctive properties. The last section compares the three bond types in a side-by-side comparison.

Choose the notes that are right for you and your students.

There are three versions:

Cloze Notes – fill in the blank

Blank notes with headings & graphics – you can add your own notes

Blank Notes with headings only

You will also find a suggested KEY included.

A digital version of the Doodle Notes is included with a KEY. Use the link found on the “Digital Files” pdf to make a copy for your Google Drive™.

These notes go nicely with the [Ionic Bonding & Ionic Compounds](#), [Covalent Bonding & Covalent Compounds](#), & [Metallic Bonding](#).

I hope you find much success with these doodle notes in your classroom!

~Beth
